Pred. No. is the number of results predicted by chance to have a corre greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present invention relates to new NOVX (NOV1-10) polypeptides. The molecules of the invention are useful for treating or preventing a NOVX-associated disorder, such as cardiomyopathy, atherosclerosis, or a disorder related to cell signal processing and metabolic pathway modulation in humans. NOVX polypeptides, nucleid acids and antibodies are useful for treating or preventing disorders or syndromes including breast cancer, Alzheimer's disease, epilepsy, Huntingron's disease, anxiety, behavioural disorders, multiple sclerosis myasthenia gravis, neurodegeneration, Parkinson's disease, pain, stroke, autoimmune disease, allergises, addiction's asthma, endometriosis, graft versus host disease, systemic lupus erythematosus, scleroderma, transplantation, psortasis, Cronn's disease, HUN (buman immunodeliciancy virus) infection, psortasis, cronn's disease, theumatodia strhitis, diabetes, thromborytopenia, bleeding disorders, metabolic disorders, obesity, glucose transport defect, glometrioned arthitis, dispetes, bestitus, schorestinal disorders, and disorders, had disorders, had disorders, had disorders, had disorders, had disorders, intextinal disorders, congenital diarrhoea, respiratory disease, pastro-intestinal disorders, urinary system disorders, respiratory disease, pastro-intestinal disorders, urinary system disorders, viral, beamatopoietic disorders, urinary system disorders, viral, bacterial, or parasitic infections.

The present amino acid sequence represents a NOVX protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cytoplasmic, nuclear, membrane bound and secreted polypeptides and nucleic acids encoding the polypeptides for diagnosing and treating e.g. cancer, Alzheimer's disease, cardiomyopathy, metabolic disease and diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Edinger S, Gerlach V, MacDougall JR, Malyankar UM, Smithson G;

Human zinc matalloprotease-like protein #2.

Human, NOVX; cardiomyopathy, atherosclerosis; cell signal processing;
Whereast cancer, Albrahmer's disease; pall-paps, Huntington's disease;
anxiety, behavioural disorder; multiple sclerosis; myathenia gravis;
maxiety, behavioural disorder; multiple sclerosis; myathenia gravis;
Whereast cancer allergy, addiction, asthma; transplantation;
Gravit versus host disease; systemic lupus erythematosus; scleroderma;
Graft versus host disease; systemic lupus erythematosus; scleroderma;
Whereast cohn's disease; HYY infection; human immunodeficiency virus;
we therosclerosis; cirrhosis; rhewmatoid arthritis; diabetes; pancreatitis;
Whereast propertial bleeding disorder; mischolar acidosis; skin disorder;
Whosporatic kidney disease, remal tubular acidosis; skin disorder;
Whematopoineric disorder; joint disorder; skeletal disorder;
Whematopoineric disorder; joint disorder; skeletal disorder;
Whosponadism; fertility disorder; viral infection; bacterial infection;
Whyosponadism; fertility disorder; viral infection; bacterial infection;
Whyosponadism; fertility disorder; viral infection; metabolic pathway modilation gene therapy;
Mical sodium/bile acid cotransporter; prohibitin MY: Clery spinessin;
macrophage stimulating procein precursor; fatty acid-binding protein;
Macrophage stimulating procein precursor; fatty acid-binding protein;
Macrophage stimulating procein; hepsin/plasma transmembrane serine protease.

WPI; 2002-590434/63. N-PSDB; ABS59324. Cytoplasmic, nuclear, membrane bound and secreted polypeptides and nuclear acide mercing the polypeptides for diagnosing and treating nuclear acide mercing the polypeptides for diagnosing and treating e.g. cancer, Althemer's disease, cardiomyopathy, metabolic disease and e.g. cancer, Althemer's disease, cardiomyopathy, metabolic disease and diabetes

Claim 1; Page 15; 305pp; English.

The present invention relates to new NOVY (NOVI-10) polypeptides. The molecules of the invention are useful for treating or preventing a NOVX-associated disorder, such as cardiomyopathy, atherosclerosis, or NOVX-associated disorder, such as cardiomyopathy, atherosclerosis, or disorder related to cell signal processing and metabolic pathway modulation in humans. NOVX polypeptides, nucleic acids and antibodies are useful for treating or preventing disorders or syndromes including care useful for treating or preventing disorders or syndromes including care useful for treating or preventing disorders or syndromes including care useful for treating of sease, publication as disease, anxiety, behavioural disorders, multiple sclerosis, mysthenia gravis, anxiety, behavioural disorders, multiple sclerosis, mysthenia gravis, chiesase, allergies, addiction, asthma, endometriosis, graft versus host disease, allergies, addiction, asthma, endometriosis, graft versus host chemoscorpenia, chiencae, intendant immunodeficiency virus) infection, thermoscorpenia, chiencae, intendant since artherosclerosis, chience disorders, remarkable in disorders, congenital diarrhoea, respiratory disease, gastro-intestinal disorders, congenital distribers, obtains and skeletal disorders, muscle bone, joint and skeletal disorders, dental disease, and infection, growth and reproductive disorders, whopognadiem, fertility, and/or other the present amino acid sequence represents a NOVX protein of the

The invention relates to a polypeptide belonging to the ADAWTS family is selected from sequences appearing as AAU79496, AAU79497 and AAU79499, calcated from sequences appearing as AAU79496. But AAU79499, calcated for macking bolypeptide, a protein having not less than polypeptide, become and to polypeptide modified from any of the polypeptides but with some anno acids deleted, substituted, added or inserted Also included are the polypeptide modifieds encoding the polypeptides (or their complementary strands or variants). The polypeptide is transforment or polypeptide protein or polypeptide, protein or polypeptide, protein or polypeptide, protein or peptide and screening compounds to promote or inhibit expression of the polypeptide or protein or to promote or inhibit expression of the polypeptide or protein, or to promote or inhibit expression of the polypeptide or protein, or to promote or inhibit expression of the polypeptide or protein, or to promote or inhibit expression of the polypeptide or protein, protein, protein or polymulectide by using the polypeptide protein, protein, protein or polymulectide by using the polypeptide protein, protein, protein or the presence of a test compound for connect before evaluating the colymulectide by using the polypeptide protein, protein, protein or the presence of a test compound for connect before evaluating the activity by measuring adaposis and screening compounds for dway composition are applicable in dagnosis and screening compounds for way composition. The gene encoding such polypeptide may any including gene thrapy.

The gene encoding such polypeptide has conserved reprolycia-type zwing and post-operative healing failure, including gene thrapy.

The gene encoding such polypeptide has conserved reprolycia-type zwing and control protein of the polypeptide and docation of the gene on the 5P-syndrome delation site on thromosome 5p15.2-15.3 (associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      72; Indels 143; Gaps 13;

13; S (Which modulates protease activity in vitro) may be used to treat a disease or disorder selected from cancers (e.g., of tissues, of blood or haematopoletic origin, of the breast, colon, lung, prostrate, cervical, brain, ovarian, bladder or kidney), immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases (e.g., central or peripheral nervous system diseases, migraine, pain, sexual dysfunction, mood disorders, attention disorders, coprition disorders in proteinsion, hypertension, psychotic disorders, neurological disorders and dyskinesias), metabolic disorders and inflammatory disorders. (I) may also be useful as a diagnostic tool for a disease or protease anino acid sequences of the invention. 121 TLHVLTQYDLVSAYEVDHRGDYVSHEIMHQRRRRAVAVSEVESLHLRLKGPRHDFHMDL 180 181 RTSSSLVAPGFIVQTLGKTGTKSVQTLPPEDFCFYQGSLRSHRNSPSHGGKFCEGSTRTL 240 61 PLFSAGTCVRHGTRSGSAWEPERPASSSTRGAAGLDGKGRDMDBAGNHRSQQTNTGTENQ 120 59 -----EYDLVSAYEVDHRGDYVSHEIMHHQRRRAVAVSEVESLHLRLKGPRHDFHMDL 112 113 RTSSSLVAPGFIVQTLGKTGTKSVQTLPPEDFCFYQGSLRSHRNS-SVALSTCQGLSGMI 171 The invantion relates to an isolated, enriched, or purified procease polypeptide (1) and polynucleoride (11) encoding (1). (1) may be used to screen for substances (5) that may modulate its activity. MDTS9 procease. The MDTS9 DNA and procein sequences of the invention are useful for screening for transforming growth factor (TGF)-beta inhibitors and for the treatment of chronic renal failure. The present amino acid sequence represents the human MDTS9 procease of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            172 R------TERADYFLRPLPSHLSWKL-GRAAQGSSPSHVLYKRSTEPHAPGASEVLVT 222

New nucleic acid encoding novel human protein (NHP), useful for the PT preparation of a medicament for diagnosing, preventing or treating PT disorders or diseases associated with the NHP, e.g., obesity	im 4; Column 19-26; 17pp; English.	XX XX The invention describes a new isolated nucleic acid comprising a	c. sequence that encodes a fully defined protein sequence comprising 491 CC or 1224 amino acids or that hybridises under stringent conditions with CC the 3475-bb sequence or its complement. The muchet acid is useful for	CC the preparation of a medicament for diagnosing, preventing or treating CC disorders (e.g. using done therapy) or diseases associated with the	CC novel human proteins, e.g., obesity. This sequence encodes a novel	XX SQ Sequence 1224 AA;	Query Match 73.5%; Score 3846.5; DB 24; Length 1224; Best Local Similarity 75.4%; Pred, No. 3e-308; Matches 738; Conservative 25; Mismatches 73; Indels 143; Gaps 13;

Human brain-originated ADAMYS family polypeptide and encoded gene, applicable in diagnosis and screening compounds for drug compositions in treating diseases due to e.g. neovascularisation ...

Example 2; Page -; 172pp; Japanese.

Example 2; Page -; 172pp; Japanese.

The invention relates to a polypeptide belonging to the ADAWYS family is celected from sequences appearing as ADAY9496, ADAY9497 and ADAY9499.

So homology with the amino acid sequence of the polypeptides or a polypeptide from any of the polypeptides by the sequence of the polypeptide or a polypeptide from any of the polypeptides by the sequence of the polypeptides or a polypeptides encoding the polypeptides by the second or variants), a recombinate vector containing any of the polypeptides encoding the polypeptide for transformant and inhibit activity of the polypeptide or protein or peptide and encoded sene transformant, an antibody that can recognize the polypeptide, protein or peptide or protein, or to promote or inhibit activity of the polypeptide or protein, or to promote or inhibit activity of the polypeptide, weetor, transformant or ontain the presence of a test compounds for contact before evaluating the polypeptide, by protein, peptide, weetor, transformant or contact before evaluating the activity by measuring signal changes. The polypeptide and encoded gene are applicable in diagnosis and screening compounds for drug composition; in the area propertied architics, and one neovascularisation, diabetic commentopathy; and paper presence of a test compound for contact before evaluating the area applicable in diagnosis, and screening compounds for drug composition; in the applicable in diagnosis, and screening compounds for drug composition, are applicable in diagnosis, and screening compounds to contact before evaluating the menaling failure, including gene therapy of the performance of a test composition, the performance of a test compounds to menaling failure, in contact performance of a test compounds to the performance of a test compound

```
The invention relates to a polypeptide belonging to the ADAMTS family is selected from sequences appearing as AAMT9996, AMT9997 and AAMT9999.

So selected from sequences appearing as AAMT9996, AMT9997 and AAMT9999.

So knowledgy with the amino acid sequence of the polypeptides or a polypeptide modified from any of the polypeptides but with some amino acid selected, substituted, added or inserted. Also included are the polypeptides encoding the polypeptides (or their complementary polymucleotides encoding the polypeptides (or their complementary exercit producing the polypeptides (or their complementary term) and acreening or a transformat which is transformed with the recombinant vector. producing the polypeptide, protein or peptide by culturing the polypeptide or protein, or to promote or inhibit expression of the polypeptide or protein, or to promote or inhibit expression of the polypeptide or protein, or to promote or inhibit expression of the polypeptide or protein, or to promote or inhibit expression of the complymented of test compound for contact before evaluating the activity by measuring slighal changes. The polypeptide and encoded gene activity by measuring slighal complements of inhibit expression of the presence of a test compound for contact before evaluating the activity by measuring slighal complements or protein. The presence of a test compound for contact before evaluating the activity by measuring slighal complements or are applicable in diagnosis and screening compounds for drug compositions in the protein or protein or protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             chronic rheumatoid arthritis, angioma, refractory skin and gastric ulcers and post-operative healing failure, including gene therapy.

The gene encoding such polypeptide has conserved reprolysin-type ZN-metalloprotease domain, disincegrin-like domain and TSP1 (thrombospondin
                                                                                                                                                                                                                                                                                                                                                                                                                   Human, ADANTS; cytostatic; antidiabetic; antirheumatic; antianceriation; angiona; antiancer; vulnerary; neovascularisation; angiona; diabetic ometropathy; orbonic rheumatoid arthritis; gene therapy; refractory skin ulcer; gastric ulcer; post-operative healing failure; reprolysin-type RN-metalloprocease domain; disintegrin-like domain; TSP1; thrombospondin type 1 domain; sexual cycle; tumour; SP-syndrome deletion; chromosome 5p15.2-15.3; cri-du-chat syndrome.

type 1) domain. Its encoded protein is characterised by high expression in ovaries, changes in expression dose depending on the sexual cycle, a decrease in tumour cell and location of the gene on the 5P-syndrome delation site on chromosome 5p15.2-15.3 (associated with cri-du-chat syndrome). The present sequence represents a ADMYTS protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      -----GLMGKDGTRHDHAILLTGLDICSWKN

Cytoplasmic, nuclear, membrane bound and secreted polypeptides and nucleic acids encoding the polypeptides for diagnosing and treating e.g. cancer, Alzheimer's disease, cardiomyopathy, metabolic disease and diabbees

The present invention relates to new NOVX (NOV1-10) polypeptides. The molecules of the invention are useful for treating or preventing a novicule disorder, such as cardiomyopathy, atherosclerosis, or NOVX-associated disorder, such as cardiomyopathy, atherosclerosis, or NOVX-associated disorder, such as cardiomyopathy, atherosclerosis, or disorder related to cell signal processing and metabolic pathway modulation in humans. NOVX bolypeptides, mucleic acids and antibodies are useful for treating or preventing disorders or syndromes including breast center, behavioural disorders, multiple scherosis myasthemia gravis, anxiety, behavioural disorders, multiple scherosis, myasthemia gravis, anxiety, behavioural disorders, multiple scherosis, graft versus host disease, altergies, addiction, aschima, endometriosis, graft versus host disease, altergies, addiction, aschima, endometriosis, graft versus host caseas, systemic lupus erythematosus, scleroderma, transplantation, psoriasis, crohn's disease, HIV (human immunodeficiency virus) infection, thrombocytopenia, bleeding disease, matched, glomexuloneparities, hypercalcremia, polycystic glucose transport defect, glomexuloneparities, hypercalcremia, polycystic glucose transport defect, glomexuloneparities, congenital disarchesa, repairatory disease, gastro-intestinal diseases, congenital disarchesa, repairatory disease, gastro-intestinal diseases, unimary system disorders, osteoporosis, dental diseases and infection, cumacle, hoom, joint and skelteal disorders, mancele, hoom, goint and skelteal disorders, extra report and disorders, viral, bacterial, or parasitic infections. The present amino acid sequence represents a NOVX protein of the 16; 129 DLVSAYEVDHRGDYVSHEIMHHQRRRRAVAVSEVESLHLRLKGRRHDFHMDLRTSSSLVA 188 455 430 76 NSOPGFLNLSNVRSHWREQHASKRIITNAMLGESALASTRKSNCVFFLSFYFFQSGMIRT 135 22 H-----RNSPSH----GGKFCEGS------TRTLKLCNSQKCPRDSVDFRA 257 136 EEADYPLRPLPSHLSWKLGRAAQSSPSHVLYKREVLVTSRTWELAHQ---PLHSSDLRL 192 258 AQCAEHNSRRFRGRHYKWKPYTQVEADLCKLYCIAEGFDFFFSLSNKVKDGTFCSEDSRN 317 318 VCIDGICELSVVSTSAHMPQPPKEDLFILPDEYKSCLRHKRSLLRSHRNEELNVETLVVV 377 456 INEDTGLGLAFTIAHESGHNFGMIHDGEGNMCKKSEGNIMSPTLAGRNGVFSWSPCSRQY 515 576 KALWCHRIGRKCETKEMPAAEGTICGHDMWCRGGQCVXYGDEGPKPTHGHWSDWSSWSPC 635 22 19 DLVSAYEVDHRGDYVSHEIMHHQRRRRAVAVSEVEPAFLQVCRAR---ELRLCVEAFPIA 189 ---PGFI------FCFYQ-GSLRS 207 -----YMPQPPKEDLFILPDEYKSCLRHKRSLLRSHRNEELNVETLVVV -----GLMGKDGTRHDHAILLTGLDICSWKNEPCDTLGFAPISGMCSKYRSCT 311 DHTLSSFCQWQSGLMGKDGTRHDHALILLTGLDICSWKNEPCDTLGFAPISGMCSKYRSCT 371 INEDIGLAFTIAHESGHNFGMIHDGEGNMCKKSEGNIMSPTLAGRNGVFSWSPCSRQY 516 LHKFLSTAQAICLADQPKPVKBYKYPBKLPGELYDANTQCKWQPGEKAKLCMLDFKKDIC Query Match 64.3%; Score 3365; DB 23; Length 856; Best Local Similarity 71.9%; Pred. instructions response to the protein sequences of the investing a compound for effectiveness as an another to a return transcribed by the protein sequences of the invention are useful for screening a compound for effectiveness as an another to a readoust the identified agonist and antagonist are useful for treating a disease or condition associated with decreased or overexpression of functional PRTS in a patient.

The PRTS protein is also useful as an immunogen for preparing polyclonal or monoclonal antibodies by hybridoma technology. An antibody that binds or he PRTS proteins is useful for detection and purification of the proteins and can be used to disgnose a condition or disease associated with expression of PRTS in a subject or in a biological sample. The proteins and can be used to disgnose a condition or disease associated with expression of partointestinal disorders such as gastritis, ulcerative of partointestinal disorders such as atherosclerosis, hypertension, myozardial infarction, etc. autoimmune/inflammatory disorders such as acquired immunodeficiency syndrome (AIDS), asthma, drawers and as acquired immunodeficiency syndrome (AIDS), asthma, heaving a portials, portials disorders such as dermatitis, scabies, communical disorders such as dermatitis, scabies, communical control of a partoin of the parton of the parton of the production of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provision of the provisio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NPKPSHGGKFCEGSTRILKLCNSQKCPRDSVDFRAAQCAEHNSRRFRGRHYKWKPYTQVE 711
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         dementia, Alzheimer's disease, Huntington's disease, multiple sclerosis, etc; or reproductive disorders such as infertility, impotence. The present sequence represents the PRTS4 protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          VLTILNMVSALFKDGTIGGNINIAIVGLILLEDEQPGLVISHHADHTLSSFCQWQSGLMG

The invention relates to a polypeptide belonging to the ADAWTS family is selected from sequences appearing as ANJO $465. MAJO $497 and ANJO $499.

Selected from sequences appearing as ANJO $465. MAJO $497 and ANJO $499.

The sequences appearing a protein having not less than a protein that contains the polypeptide, a protein having not less than 50 yeaptoptide modified from any of the polypeptides but with some amino acid sequence of the polypeptides of acids delated, substituted, added or inserted. Also included are the polypeptides encoding the polypeptides (or their complementary strands or variants), a recombinant vector containing any of the polypeptide, protein or producing the polypeptide, protein or peptide and screening compounds to promote or inhibit expression of the polypeptide or protein, or to promote or inhibit expression of the polypeptide or protein, or to promote or inhibit expression of the polypeptide or protein, or to promote or inhibit expression of the polypeptide by presence of a test compound for contact before evaluating the activity by measuring signal changes. The polypeptide and encoded generative plantand diseases and ecreening compounds for drug compositions in the presence of a test compound for contact before evaluating the activity by measuring signal changes. The polypeptide and encoded generative are applicable in diagnosis and screening compounds for drug compositions in treating diseases and the polypeptide and encoded generative healing failure, including gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                          antiarthritic; antiulder; vulnerary; neovascularisation; angioma; diabetic omentopathy; chronic rheumatoid arthritis; gene therapy; refractory skin ulcer; gestric ulcer; post-operative healing failure; reprolysin-type ZN-metalloprocease domain; disintegrin-like domain; TSP1; thrombospondin type I domain; sexual oyole; rumour; SP-syndrome deletion; chromosome Spis,2-15.3, C11-du-chet syndrome.
Human brain-originated ADAWTS family polypeptide and encoded gene, applicable in diagnosis and screening compounds for drug compositions in treating diseases due to e.g. neovascularisation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nagase T, Nomura N, Yano K, Murakami K, Yasuda S;

The gene encoding such polypeptide has conserved reprolysin-type ZN-metalloprotease domain, and TSD (thrombospondin type 1) domain. Its encoded protein is characterised by high expression in ovaries, changes in expression dose depending on the sexual cycle, a decrease in tumour cell and location of the gene on the 5P-syndrome deletion site on chromosome 5p15.2-15.3 (associated with Cri-du-chat syndrome). The present sequence represents a ADAMTS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ADAM TS-like finc meralloprotease; TNF antagonist; psychosis; bebantagonist; COPD, congestive heart fallure myocardial infarction; schaemic heart disease; arrhythmia; hypertension; vascular disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a human protein having aggrecanase activity, designated MOTS8 (metallopyrocease and disintegrin with thrombospondin type 1 repeats 8). The human MOTS8 protein has osteopathic, antirheumatic and antiarthritic activities. The human MOTS8 protein and polynoclacide are applicable in screening inhibitors as preventives or remedies for treating joint diseases in Steopathritis and rheumarcid arthritis. Human MOTS8 has been located to chromosome 16, and more specifically to chromosome 16, and more specifically to chromosome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human aggrecanase MDTS8 protein SEQ ID NO:2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ¥.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1, Page 46-49; 58pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to a novel isolated polymucleotide encoding an CMAM-TS-like zinc metalloprotease polygeptide. The protein of the cardination may have cardinath, asotropic, antiarrhythmic, hypotensive, artiparkinsonian, noctropic, antiarrhythmic, hypotensive, artiparkinsonian, noctropic, neuroprotective, creatportective, cartiparkinsonian, noctropic, neuroprotective, creatportective, artiparkinsonian, noctropic, neuroperotective, creatportess, articonvulsant, anti-HIV neuroleptic and tranquiliser activity.

The DNA sequence of the invention may be used in gene therapy as a crime particular of the invention may be used in gene therapy as a carticonvollant state and comparison and expension which are alloproteases an expression vector containing the ADAM-TS-like zinc metalloprotease. These reagents can be used in the manufacture of a medicament for disorders such as Cropp, cardiovascular disease (congestive heart failure, myocardial infarction, isohaemic heart disease, atrial and ventricular arrhythmias, hypertension and peripheral vectors at a disease, and activated a schizophrenia, spychosis and attention of Creutzfeld-Jakob dementia, schizophrenia, spychosis and attention can also be used for screening and disponstition seave. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     403

RESULT 15 ABJ19379

Ge-1370 residue amino acid sequences, given in the specification, a mature form of them, or a sequence that is at least 95 # identical to, or chaving one or more conservative amino acid substitutions in one of the 35 amino acid sequences. The polypeptides, mucleic acid molecules and of an interesting a syndrome associated with a human disease, preferably a now-associated disorder. The mucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or disease, preferably a now-associated disorder. The mucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or disease, preferably a now-associated disorders, diabetes, obseity, infectious diseases. (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer associated cachexia, neurodegenerative disorders, Altheimer's disease, parkinson's disease, immune disorders, hematopoietic disorders, cancer and various dyslipidaemias, or metabolic disturbances associated with obseity, metabolic x syndrome, and wasting disorders. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. meurogenessis, call and angiogenesis, in gene therapy, in generation of antibodies that bind angiogenesis, in gene therapy, in generation of antibodies that bind angiogenesis, in gene therapy, in generation of antibodies that bind angiogenesis, in generation, and antibodies that bind angiogenesis, in generation of antibodies that bind angiogenesis, in generation, and each the acids are further used as hybridisation and pagnostic acids are further used as hybridisation and pharmacogenomics. This sequence represents a NOVX related protein of the

"Cloning, expression analysis, and structural characterization of

seven novel human ADANTES, a family of metalloproteinases with distinged and thrombospondin-1 domains."; dene 283:49-62(2002).
-!- COPRACTOR: Binds 1 zinc ion per subunit (By similarity).
-!- COPRACTOR: Expressed in fetal lung, liver, and kidney metrix (By similarity).
-!- TISSUE SPECIFICITY: Expressed in fetal lung, liver, and kidney and in adult brain, prostate, submaxillary gland, and endothelium.
-!- FIM: The precursor is cleaved by a furin endopeptidase (By similarity).
-!- SIMILARITY: Enlongs to peptidase family N12B.
-!- SIMILARITY: Contains 1 disintegrin-like domain.
